DUKE MORGAN, RN, BSHA

Director of Clinical Systems | Healthcare Technology and AI

Nashville, TN | 931-384-0389 | Dukeisrn@me.com | dukemorgan.net | linkedin.com/in/duke-morgan-rn-bsha-029b50b

PROFESSIONAL SUMMARY

Registered nurse and healthcare technology leader with 20+ years of experience across emergency nursing, enterprise EMR implementation, and clinical systems leadership. Directs multiple EMR platforms and a multimillion-dollar vendor portfolio for a multi-state fertility care network. Combines clinical workflow expertise with hands-on software development to improve record access, automate operations, and introduce AI with defined controls for patient data.

CORE EXPERTISE

Clinical systems strategy | EMR/EHR implementation and optimization | Product roadmaps | Vendor negotiation | Budget ownership | Cross-functional delivery | Clinical workflow design | Data migration | AI architecture and governance | HIPAA and PHI controls | HL7/FHIR interoperability

PROFESSIONAL EXPERIENCE

Director of Clinical Systems

Inception Fertility Ventures, LLC | Nashville, TN | Jun 2017 – Present

- Lead clinical systems strategy and the full product lifecycle for multiple enterprise EMR platforms supporting hundreds of clinical users across a multi-state fertility care network.
- Manage a multimillion-dollar annual vendor portfolio, including contract negotiations, service-level agreements, and renewals; expand platform capabilities while maintaining spend.
- Sustain 95% on-time delivery across platform upgrades, cloud migrations, and compliance programs by coordinating clinical operations, engineering, vendors, and executive stakeholders.
- Direct the clinical systems roadmap, including server migrations, platform conversions, enterprise application updates, and integration of new systems with the EMR.
- Built the business case for enterprise AI and established a BAA-governed Azure AI Foundry pathway. Enforce routing controls that keep PHI workloads on BAA-covered or local inference and limit commercial-model work to schema, code, and architecture.
- Run weekly reviews with the team to identify automation opportunities in clinical, administrative, and routine operational workflows.

Clinical Implementation Specialist, Perioperative Systems

MEDHOST | Nov 2016 – Jun 2017

- Led workflow analysis and future-state design for multi-hospital perioperative EMR implementations across OR, pre-op, and PACU; configured modules and trained clinicians for go-live.

Clinical Application Analyst, Corporate Deployment

Community Health Systems | Mar 2016 – Oct 2016

- Developed enterprise EMR workflow templates aligned with corporate clinical and regulatory standards; supported onsite go-lives in emergency, surgical, and medical-surgical departments.

Support and Implementation Clinical Analyst, RN

MEDHOST | Jan 2013 – Mar 2016

- Analyzed clinical workflows, configured EMR systems, and worked with bedside clinicians to validate builds before go-live across emergency, perioperative, and medical-surgical settings.

SELECTED TECHNOLOGY AND OPERATIONAL RESULTS

- **Unified clinical record access:** Delivered a .NET 8 and React/TypeScript application on Azure that consolidated four legacy EMR platforms into one read-only clinical viewer. Migrated 3M+ clinical records, 770K+ documents, and 80K+ treatment cycles. Replaced shared credentials with Entra ID single sign-on and implemented a global authorization filter to control access across clinics.
- **AI orchestration and workflow automation:** Architected and operate specialized AI agents through a model gateway to Azure AI Foundry, with access scoped by role and data classification. Built a shared knowledge base and reusable automation skills for project, task, knowledge base, and change advisory board intake. Added cross-model code review before work is marked complete.
- **EMR administration and clinical data analysis:** Built a Python/Flask console for chart merges, bulk provisioning, drug library management, and permissions across site databases. Added live-state validation to stop changes when conditions differ from the approved plan. Developed a query assistant over a 600+ table SQL Server schema, restricted to schema and metadata, to shorten root-cause analysis and analyst onboarding.
- **Data integrity and access remediation:** Corrected a non-unique record key in a laboratory results migration and recovered records that would otherwise have been lost. Audited permissions across two production sites, removed excess access, and identified a vendor audit gap for partial permission changes. Secured patient document storage with authenticated access and row-level controls.

EARLIER CLINICAL EXPERIENCE

Emergency Department Charge Nurse

Williamson Medical Center | Apr 2010 – Jan 2013

- Led emergency nursing operations and served as a computerized provider order entry (CPOE) superuser, improving documentation workflows and communicating operational issues to IT.

Emergency Department Charge Nurse and Staff Nurse

Southern Hills Medical Center (HCA) | Jul 2005 – Jan 2010

- Managed emergency nursing operations and supported EMR template optimization for Joint Commission and regulatory compliance.

TECHNICAL SKILLS

SQL Server | Python | PowerShell | .NET | React/TypeScript | REST APIs | Git | Azure | Azure AI Foundry | Multi-agent orchestration | Retrieval-augmented generation | Local LLM deployment | Entra ID and SSO | Role-based access control | Supabase/PostgreSQL | Microsoft 365

EDUCATION

Bachelor of Science, Healthcare Administration | Western Governors University | 2025

Associate of Applied Science, Nursing | Excelsior College | 2007

LICENSURE AND CERTIFICATES

- Registered Nurse | Tennessee / Multistate Compact License | Active
- OpenAI Academy | Agents and Workflows & AI Foundations Credential | 2026
- Claude Academy (Anthropic) | AI Fluency for Builders & Foundations | 2026
- Google Cloud | Generative AI Leader Specialization Certificate | 2026
- Microsoft | AI Agent Fundamentals with Azure AI Foundry Course Certificate | 2026
- Microsoft | SQL Server Specialization Certificate | 2026
